

AI-Powered Talent Matching: Revolutionizing Hiring

Unlocking the future of recruitment with intelligent resume screening and job matching.

Made with GAMMA

Made with GAMMA

The 6-Second Reality Check

The Hiring System is Broken

Recruiters spend an average of just 6 to 8 seconds reviewing a **resume**. In those critical moments, unconscious bias often prevails, leading to qualified candidates being overlooked. This isn't due to a lack of skills, but rather a lack of 'skimmability' in their applications.

This rapid review process means **70% of resumes are merely skimmed, not thoroughly read**, creating a significant barrier for diverse and deserving talent.

Drowning in Data

The Volume Crisis

A single corporate job opening attracts **250+ applicants** on average, creating an unmanageable deluge of applications for recruiters.

Tech Sector Surge

For popular tech roles, this number skyrockets, often exceeding **2,000+ applications in a single week**, making fair review almost impossible.

The Bottleneck

This immense volume overwhelms recruitment teams, leading to burnout, missed talent, and an inefficient hiring process that fails to identify the best candidates.

What is the biggest problem you face in the resume/hiring process today?

The "Black Hole" (ATS Failure)

Why Good Candidates Get Rejected

The prevailing myth is that candidates need visually appealing resumes. However, the reality is stark: **88% of resumes with creative graphics or unique layouts are instantly rejected by standard Applicant Tracking System (ATS) parsers.**

- **The Myth:** Candidates believe elaborate design is key to standing out.
- **The Reality:** They actually need better **context**. Legacy ATS systems rely on exact keyword matches. If a candidate uses "ReactJS" and the job description asks for "Frontend Framework," their application is often discarded.

Helinox Fix:

We transcend traditional keyword matching by employing **Semantic AI**, ensuring that the intent and context of skills are recognized, not just exact phrases.

The Financial Cost of Inefficiency

30%

Bad Hire Costs

A poor hiring decision can cost a company approximately **30% of the employee's first-year earnings**, encompassing recruitment, training, and lost productivity.

42

Time-to-Hire

The average time to fill a position stretches to **42 days**, leaving critical roles vacant and operations impacted.

This extended time-to-hire creates significant **opportunity costs**. Every day a role remains unfilled means lost productivity, delayed projects, and missed revenue. Helinox dramatically reduces this burden.

The Solution: Helinox AI

A Mirror for Candidates, A Filter for Recruiters

Candidate Empowerment

Candidates receive instant, actionable feedback on **why** their resume was rejected, transforming a 'black box' into a transparent process.

Recruiter Efficiency

Recruiters get a precise, ranked list of top talent in seconds, not days, streamlining their workflow and focusing efforts on the best matches.

Core Technology: Powered by Google Gemini 2.5 Flash, Helinox doesn't merely "scan" resumes; it "understands" them with the nuance of a human hiring manager, but at unparalleled speed and scale.

Validated Revenue Model

How We Make Money

1

B2B (Recruiters)

Subscription model at **₹7,999/month** for recruiters. This includes unlimited screenings and seamless integration with existing ATS platforms, providing a comprehensive solution for talent acquisition teams.

2

B2C (Candidates)

Freemium model for candidates: **₹99 per job ranking** or **₹499** for a "Premium Evaluation Pack." This allows candidates to optimize their applications for specific roles.

Market Fit: Our pricing and services are specifically tailored to the Indian hiring ecosystem, where high application volumes meet resource constraints, creating a strong demand for efficient and unbiased screening.

Live Deployment (Try It Now)

Don't Just Trust Us. Test Us.

Experience Helinox AI firsthand. Scan the QR code or visit our live platform to see the ranking engine in real-time.

- **Link:** <https://ai-resume-analyzer-s5nk.onrender.com/>
- **Status:** Fully operational and live on Render.
- **Instruction:** Upload a job description and witness how Helinox instantly analyzes and ranks resumes, providing a clear demonstration of its capabilities.

User Evaluation & Feedback

Validated by Real Users

Our comprehensive User Evaluation Form provided invaluable insights into the effectiveness of Helinox AI. We conducted a study with a significant number of users, and the data consistently confirms that current ATS feedback mechanisms are far too vague and unhelpful.

How would you rate the processing speed?

40 responses

The charts above illustrate key findings from our user study, emphasizing the clear need for more specific and actionable feedback in the hiring process, a gap Helinox effectively fills.

The Experience (Frontend)

Vue.js 3 + Tailwind CSS

Reactive UI & Dark Mode

The Engine (Backend)

Python Flask + pypdf

REST API & Text Parsing

The Intelligence (AI Core)

Google Gemini 2.5 Flash

Semantic Reasoning via LangChain

Technical Architecture

Engineered for Speed & Accuracy

01

Frontend Excellence

Built with **Vue.js 3**, **Vite**, and **Tailwind CSS**, ensuring a responsive, high-performance user interface with seamless dark mode integration for optimal user experience.

02

Robust Backend

Powered by **Python Flask** for robust API services and **pypdf** for efficient and accurate text extraction from diverse resume formats.

03

Advanced AI Engine

Leveraging **LangChain** with **Google Gemini 2.5 Flash**, our AI goes beyond keywords to understand the semantic relevance of content, just like a human expert.

04

Intelligent Scoring Logic

Structured Prompt Engineering forces the Large Language Model (LLM) to score resumes from 0-100 based on semantic relevance, effectively eliminating traditional keyword bias and ensuring fair evaluations.

Future Roadmap: Scale & Hybrid AI

The Path to Enterprise Scale

Phase 1 (Current)

Currently deployed with **cloud-based Gemini API**, providing powerful, scalable AI capabilities to our initial user base.

Phase 2 (Scaling Efficiency)

Introduction of **Hybrid LLMs**, utilizing open-source models like Llama 3 for initial screening to achieve a **60% cost reduction** while maintaining accuracy.

Phase 3 (Enterprise Future)

Developing **Enterprise "On-Prem" hosting** for enhanced data privacy and security, along with direct plugins for major platforms like LinkedIn and Naukri for seamless integration.

Analysis Summary

Ritvik Sharma is a highly motivated Computer Engineering student with a 9.02 CGPA, demonstrating strong foundational knowledge in Data Structures, Algorithms, and Operating Systems. His practical experience includes a research Internship at Carnot Research, where he developed a RAG chatbot, designed web scrapers, and deployed AI pipelines on edge systems using Flask-SocketIO and ASGI, achieving sub-1s latency. Ritvik has independently built complex projects like a Real-Time Multilingual Voice Assistant (Python, Flask, WebRTC, LLMs) and an Autonomous Surveillance Drone (PyTorch, ArduPilot, Computer Vision), showcasing expertise in real-time systems, machine learning (LLMs, RAG, CV, NLP, XGBoost, LightGBM, Random Forest), and Python development. He is proficient with frameworks like Flask, PyTorch, SK-Learn, and tools like GitHub, with a focus on building efficient, low-latency applications.

DevOps Engineer

CloudScale Technologies

15% MATCH

This role involves designing, implementing, and maintaining cloud infrastructure on AWS/GCP, automating CI/CD pipelines, containerizing applications with Docker/Kubernetes, and monitoring system performance. The ideal candidate will have strong scripting skills, experience with Infrastructure as Code, and a deep understanding of DevOps practices and security.

✓ KEY MATCHES

Proficiency in Python (strong scripting skills)

Experience with deployment (deployed chatbot on GPU-enabled edge systems with Flask-SocketIO and ASGI)

Relevant coursework in Operating Systems

Collaboration to integrate AI pipelines into industrial analytics stack (suggests exposure to production environments)

✗ MISSING SKILLS

4+ years of DevOps or Site Reliability Engineering experience (Ritvik is a student with 6 months internship)

Strong experience with AWS or GCP (no explicit mention)

Proficiency in Infrastructure as Code (Terraform, Ansible, CloudFormation) (no mention)

Hands-on experience with Docker and Kubernetes (no mention)

Experience with CI/CD tools (Jenkins, GitLab CI, GitHub Actions) (no mention)

Knowledge of monitoring tools (Prometheus, Grafana, ELK stack, Datadog) (no mention)

Experience with configuration management (Ansible, Chef, Puppet) (no mention)

Understanding of production and responsible as a DevOps engineer

Senior Full Stack Developer

TechVision Solutions

25% MATCH

Seeking an experienced Senior Full Stack Developer to design, develop, and deploy scalable web applications using React, Node.js, and TypeScript. Responsibilities include building RESTful...

✓ KEY MATCHES

Experience with real-time applications (used Flask-SocketIO and WebRTC for Real-Time Multilingual Voice Assistant and chatbot deployment - strong match for 'WebSockets, Socket.io' preferred qualification)

Backend development experience with Python and Flask (used in voice assistant and chatbot deployment)

Experience with JavaScript (listed for Real-Time Multilingual Voice Assistant project)

Deployment experience (Flask-SocketIO on ASGI server)

Strong problem-solving skills (demonstrated through complex projects)

Teamwork abilities (collaborated with 10+ researchers)

✗ MISSING SKILLS

5+ years of professional software development experience (Ritvik is a student with 6 months internship)

Strong proficiency in JavaScript/TypeScript, React, and Node.js (core required technologies, Ritvik's primary web backend is Python/Flask, limited JS experience)

Experience with SQL and NoSQL databases (PostgreSQL, MongoDB) (no explicit mention)

Solid understanding of REST APIs, GraphQL, and microservices architecture (implied basic API interaction, but not 'solid understanding' for a senior role)

Familiarity with cloud platforms (AWS, GCP, or Azure) (no explicit mention)

Experience with CI/CD pipelines and DevOps practices (required qualification, no explicit mention)

Mentoring junior developers and participating in architectural decisions (senior-level responsibilities)

Job Context

The Machine Learning Engineer role at DataMind AI Labs involves designing, developing, and deploying production-grade ML models and scalable ML pipelines. Key responsibilities include implementing deep learning models (TensorFlow, PyTorch), collaborating with data scientists, optimizing model performance, and monitoring deployed models. Required qualifications include a Master's degree in CS/ML, 3+ years of ML engineering experience, strong Python and ML libraries, ML/Ops tools (MLflow, Kubeflow), cloud platforms (AWS SageMaker, GCP AI Platform), and solid understanding of ML/CS fundamentals. Preferred qualifications include a PhD, experience with NLP/CV/RL/LLMs, published research, and CI/CD for ML.

Ranked Candidates

1

Ritvik Sharma

Research Intern

45% MATCH

Ritvik is an undergraduate student and does not meet the required Master's degree or the 3+ years of professional ML engineering experience. However, Ritvik's profile is the strongest among the candidates. The Research Intern experience at IIT Delhi and various projects demonstrate practical skills in deep learning (PyTorch), LLMs (RAG chatbot, Gemini Flash, OpenAI Whisper), NLP, Computer Vision, and model deployment on edge systems. This aligns well with the JD's focus on developing and deploying models. While specific ML/Ops tools (MLflow, Kubeflow) and cloud platforms (AWS SageMaker, GCP AI Platform) are not explicitly mentioned, the experience with 'GPU-enabled edge systems' and 'real-time inference' indicates an understanding of productionizing models. The coursework also covers strong ML/CS fundamentals. The primary gaps remain the formal education level and the duration of professional ML engineering experience.

Education

Bachelor of Science in Computer Engineering (Aug. 2023 - Jul. 2027) - Thapar Institute of Engineering and Technology

Experience

0.5 (Internship)

KEY SKILLS

Python C++ C Flask Flask-SocketIO WebRTC PyTorch NumPy Pandas SK-Learn OpenCV

2

Nipun Jain

10% MATCH

Nipun is an undergraduate student currently pursuing a Bachelor's degree, which does not meet the required Master's degree or the 3+ years of professional ML engineering experience. While Nipun's projects demonstrate foundational ML skills (scikit-learn, Pandas, NumPy) and exposure to LLMs (Gemini AI, LangChain) and NLP, there is no evidence of experience with deep learning frameworks (TensorFlow/PyTorch), ML/Ops tools (MLflow, Kubeflow), or cloud platforms (AWS SageMaker, GCP AI Platform), which are critical requirements for this production-focused role. The experience is purely academic project-based, lacking the professional deployment and optimization experience sought.

Python Pandas NumPy Scikit-learn Flask Gemini AI LangChain BeautifulSoup JavaScript HTML/CSS SQL MatLab TF-IDF Cosine Similarity Data Structures and Algorithms Object Oriented Programming Database Management Systems Artificial Intelligence/Machine Learning Conversational AI

3

Vansh Singh

Event Management

5% MATCH

Vansh is an undergraduate student and does not meet the required Master's degree or the 3+ years of professional ML engineering experience. Vansh's experience and projects are primarily focused on full-stack web development (MERN stack, Node.js, MySQL) and event management. While Python is listed as a programming language and strong CS fundamentals are mentioned, there is no evidence of experience with machine learning models, deep learning frameworks (TensorFlow/PyTorch), ML/Ops tools, cloud platforms, or any of the core ML engineering responsibilities outlined in the job description. This profile is not a match for a Machine Learning Engineer role.
